

Signature® Cassette Printer

Print directly onto cassettes for more efficient and more accurate processing of lab specimens.

Primera's Signature Cassette Printer can significantly increase the efficiency of your lab while helping to reduce the risk of misidentification of specimens. You can print text, graphics and logos along with linear and 2D bar codes directly onto the face of cassettes, making your workflow more efficient while increasing patient safety.

Signature is available now in a stand-alone manual printer and will soon be available in a fully automated complete system. Labs can first purchase a manual printer and upgrade that printer with robotics to make it a completely automated system at a later time.

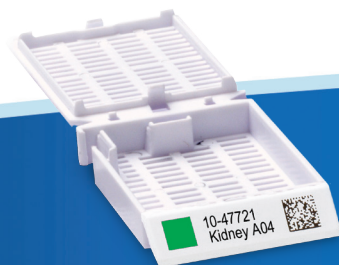

The small size of SCP-M allows labs to place a direct-to-cassette printer at each grossing station. One cassette is manually loaded at a time. Print speed is extremely fast at about 6 seconds per cassette.

Several Configurations Available

Printers are available for 3rd party integration as well as in complete, stand-alone systems which include printer, PTLab™ SE software, scanner, keyboard, mouse and PC.

Key Features and Benefits:

- » On-demand printing
- » Black or color printing
- » Print speeds at up to 6 seconds per cassette
- » Thermal transfer printing at 300 dpi
- » Prints on standard cassettes with 35° to 45° angles with either lid on or lid off, no adjustments needed
- » Does not require proprietary cassettes
- » Virtually silent while printing
- » No smell or smoke and no venting needed
- » Chemical-resistant ink – ensures reliable identification of cassettes
- » USB interface – ability to integrate with Laboratory Information Systems
