

IMMUNOSPARK VET product line

**Diagnostic
Kits for the
veterinary
laboratory**

ImmunoSpark

ImmunoSpark is willing, through a network of professionals in different fields of the IVD market, to propose a brand new way to approach and obtain what we call the "Diagnostic Information".

ImmunoSpark sees in the Diagnostic Information the key to make available a better and more sustainable lifestyle for the human being. Prevention of disease and personalized therapy are now being a reality for patients and physicians, provided that an innovative, integrated approach to diagnostics is made available.

Our Mission

After 20 years of experience in the product design, development, manufacturing and marketing of systems in the Immunology and Molecular Diagnostics fields, the mission of ImmunoSpark is to make integrated diagnostic formats available to our customers and partners.

While this, we keep to develop new products and diagnostic solutions based on the increasing demand for standardized, qualified and automated systems at a sustainable price.

ImmunoSpark veterinary kits

ImmunoSpark offers a wide range of veterinary diagnostic assays in different technologies:

- We offer the possibility to perform a first level screening using our ImmunoChromatographic rapid tests (**QuickSpark** VET line). Not requiring any kind of automated unit to read and acquire the analytical response.
- We offer an ELISA solution of tests for the laboratories that want to perform tests on automated machines (**PRISMA** VET line) or, manually, on microplate readers.
- For the more advanced laboratories, we give also the possibility to perform molecular tests (**Genespark** VET line) on open platforms.

ImmunoSpark offers a complete list of tests for *VETERINARY LABS* covering the most important panels for the usual detection routine in *PETS*, *LIVESTOCK* and other animals.
